

## A Button hole with fresh flower

The materials require to be fresh, but wiring is permitted.

Fine florist wire or fuse wire will hold your material firmly and the florist wire can be purchased in green if desired. Ribbons, tapes and jewels can be added if desired and are useful for binding.

Position your materials in a pleasing arrangement and wire them together [this is the time to loop any of your foliage is you want]

Add any embellishments.

Then you can finish off by covering the stems. This can be done with florist tape, electrical tape, twine or ribbon.

Double sided Sellotape

helps to keep twine or ribbon in place.

Put your boutonhole in a cool place [the

top of the fridge would do]. You can display it on a small piece of fabric, napkin or board if you wish.
