

Arrangement for a busy lifestyle

The aim of this arrangement is something simple including few materials, which can be done quickly. The normal rule is around 3 flowers or sprays, without a lot of foliage and accessories.

This can be done effectively by going for very classic lines.

Using interesting containers and materials. The twisted willow and bamboo in these pictures show how they can add structure to your piece

Or manipulating materials such as the foliage to get striking effects.

You may use wiring and pins or twine to position your materials.

As with all arrangements points will be awarded by representation of the theme, balance of the piece and the quality of presentation. Polish your container, cover oasis or fixing points, and ensure your materials are of the very best quality.

This is a fun one to try, with not too much time or expense. A good starter project.
